

PETROL AND OIL STORAGE POLICY

Petrol is stored in 23litre demountable containers in either of the club's two safety boat garages with **the tank vents closed**. Both garages to be kept locked and secure when the safety boats are not in use.

Two stroke oil is stored in one of the safety boat garages prior to mixing with petrol.

The club uses both four and two stroke engines and the safety boat helm must ensure that the correct fuel supply is connected.

The responsibility to ensure the correct storage and usage of fuel rests with the Safety Boat officer and committee members.
